Professional Summary

Final-year ENSAH engineering student, graduating in September 2027, with 2 software-development internships and projects spanning AI, data pipelines, Azure IoT and business-process automation. Builds Python and Java applications with React/Angular interfaces and SQL databases. Seeking a PFE engineering internship.

Skills

Programming: Python, SQL, Java, JavaScript, TypeScript, Scala

AI and data: PyTorch, scikit-learn, pandas, NumPy, OpenCV, Sentence Transformers, RAG, ChromaDB, Matplotlib, Seaborn, data visualization

Web and storage: React, Angular, FastAPI, Flask, Spring MVC, Odoo, REST APIs, PostgreSQL, MySQL, SQLAlchemy, Hibernate/JPA

Pipelines and cloud computing: Apache Airflow, ETL/ELT, Docker/Compose, Azure Functions, Azure IoT Hub, Event Grid, MQTT, Linux, Git/GitHub (version control)

Additional knowledge: Spark/PySpark, Kafka, Hadoop/HDFS, TensorFlow/Keras, CI/CD pipelines, GitHub Actions, Kubernetes, Terraform, Ansible, AWS, Google Cloud, Power BI, Tableau

Business processes: Requirements analysis, workflow automation, UML, process mapping, Agile/Scrum

Professional Experience

Software Development Intern | Maroc Modis / Triumph
July 2026 – September 2026

- Developed an employee learning management system with React, FastAPI, SQLAlchemy and MySQL, covering courses, lessons, quizzes, certificates and progress tracking.
- Implemented access for 5 user roles with JWT authentication and bcrypt password hashing; centralized learner progress and training reports.

Software Development Intern | SavoirExpert, Accounting Firm
July 2025 – August 2025

- Built a document-readiness tracking platform that centralized document statuses and pending work to support accounting staff follow-up.

Education

Engineering Degree in Digital Transformation and Artificial Intelligence
National School of Applied Sciences (ENSAH), Al Hoceima, Morocco
September 2022 – September 2027 (expected)
Baccalaureate in Physical Sciences | Bir Anzarane High School, Sefrou | 2022

SAAD ABS | Selected projects

AI and Data Engineering Projects

Moroccan Darija OCR | GitHub

Team project | Python, PyTorch, OpenCV, EasyOCR, FastAPI

- Contributed to Arabic and Moroccan Darija text recognition using image preprocessing and a CRNN with bidirectional LSTM and CTC loss; evaluated recognition with CER and WER.

FindUrWay – Job Data Pipeline | GitHub

Team project | Python, Apache Airflow, PostgreSQL, Docker Compose

- Co-developed daily ingestion from 2 job APIs, Adzuna and France Travail, across 6 career categories; normalized and deduplicated records in PostgreSQL and aggregated skill-demand statistics.

Document RAG Assistant and MNIST GAN | GitHub

Python, PyTorch, Sentence Transformers, ChromaDB, Groq

- Built a document assistant with chunking, vector embeddings, semantic retrieval and context-grounded LLM responses using retrieval-augmented generation (RAG).
- Implemented an MNIST generative adversarial network with generator/discriminator training, loss tracking and generated-image visualization.

Career2Life – Salary Prediction | GitHub

Team project | Angular, Python, pandas, scikit-learn

- Contributed to a career-planning application with a Random Forest regression pipeline; cleaned salary and experience data, encoded features and evaluated predictions using MAE and MSE.

Software and Cloud Projects

Odoo – Hotel Reservation Management | GitHub

Python, Odoo, XML, FastAPI mock API

- Developed room, client and reservation workflows with pricing and overlapping-booking checks; added a customer portal and scheduled synchronization tested against mock booking APIs.

BudgetChef – Personalized Meal Planner | GitHub

Team project | React, Flask, Python, Groq

- Contributed to meal planning with budget and nutrition targets, user profiles, feedback-based preferences and LLM-generated meal descriptions.

Azure IoT – LED Control and Telemetry | GitHub

Python, Azure Functions, Azure IoT Hub, Event Grid, MQTT

- Developed telemetry-processing handlers and HTTP endpoints for LED control and status monitoring; implemented automatic LED-state updates based on light-level thresholds.

PFE Defense Scheduling Platform | Java, Spring MVC, MySQL, Apache POI

- Built a web application that imports student, professor, room and time-slot data from Excel to generate conflict-free defense schedules.

Additional Software Projects

- Built AS Travel, a Python/PySide desktop trip planner with expense tracking and activity suggestions.
- Developed an employee attendance application with check-in/check-out and working-hours records, and a C car-rental system with file-based persistence and reservation scheduling.
